9.3. Relations

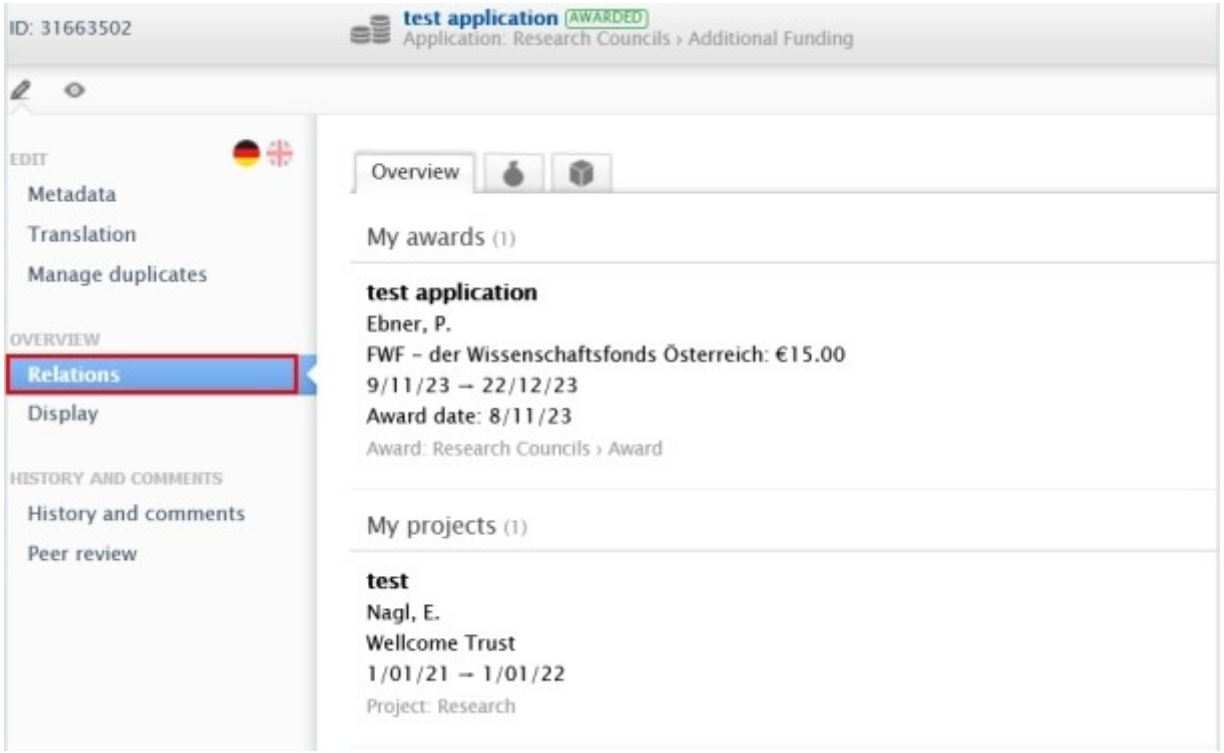

One of the most important advantages of Pure is, that it **connects** content types with each other. Using relations can help to improve our data quality. For example, a Research output is always related to a person and the person's organisation. These connections are shown under *Display* tab.

To manually add relations to a record:

1. Search for the exact record, you want to link with another (in Pure already existing) record.
2. Go the *Relations* or *Related* …. section, and choose the type of the content. Begin to search for the record you want to add to this record.
3. Click on *Save*.

These relations are shown in the *Relations* tab of the record:

To manually add relations to a record **depends on the workflow state**. For example, if a Research output has gone through the validation process, adding a relation is no longer possible for Researchers.
